

I am building a game. Below is a script and here are general rules around it:

- This is a text narration world exploration game.
- Visual set up:
 - The visual description also gives a sense of what the game should look like. It should use an outdated system that screams low-taste.
 - Make sure that this visual system is coded in a way that is separate from the rest of the backend/content file so that I can go in and edit it.
 - In the main game layout there should be some core scenes that player will navigate through:
 - Login to Replak.ai - where you go through the flow of beginning the game
 - Main gameplay - where player will stay most of the game this portion will have the following components:
 - Top left there is a small box showing an image of a person (player) with a name and below this are a list of stats about the player. This can also include some world building information about the player.
 - The terminal box sits from the middle to the right side of the screen, taking up almost the rest of the page. It is in this terminal that the entire gameplay will happen.
 - Above the terminal box sits 2 gauges represented in rectangular blocks that represent: HP and Time Left, 2 which cannot hit 0 before the player leaves the office.
 - Time follows the updates that are being made in the game. Whenever there is time that is mentioned, update the bar to match this.
 - Animation:
 - When the bars are updated show an animation of it increasing or decreasing
 - When the texts are rolling into the terminal from the script (narrator/other players talking to you) it should appear as though someone is typing that message, letter by letter.
- When something is written without any indentation, it means that it's a visual change that needs to be coded out. When something is indented, that is going to be text that is typed out in the main gameplay.
- When something is indented, it means that it's part of the game script that the player sees and it'll appear in the terminal.
- When it says a [Replak.ai](#) system this is a pop up that appears that the player has to 'x' away in order to continue with the game play.
- For **NARRATOR** all of its content will be typed out inside the terminal (without showing the name "NARRATOR" since the terminal itself is clearly the narrator). The way these text should be typed is one letter at a time at reading speed.

- For all characters except **NARRATOR** and **PLAYER**, they should display their name such as "Jerry: " then show what they, this should also appear in the terminal box.
- When it says **PLAYER**: this is a chance for the player to type or select something in the terminal to make a choice. The options will either be:
 - Player has to type out what is already written in the command line
 - Player has to type out one of multiple options that is already written in the command line
 - The player has to type an entirely open-ended prompt to respond to the game and engage in gameplay.
- The section where it says *<Open input response:>* followed by a bullet list is where the game needs to call an LLM model to evaluate the responses of the player. The bullet points provide a guide of how that gameplay would happen. These include constraints. Each of the scenes and tutorials are slightly different. The way I want you to design the code is as follows:
 - Set up some core game mechanic functions that can be reused, for example: selecting between multiple choice options, calling the model, rejecting a blatantly nonsensical response, inserting of user decision from prior turns that are indicated by [], etc.
 - Each of the scenarios however has slightly different prompts and constraints that have this organization clearly set up so I can go in and adjust them later.

[replace this with the latest version of the script]

FIRE (ESC) APE

By

CHELSEA HAN & TIFFANY QUON

Date: Aug 9, 2026 (latest ver)

A work terminal opens to fill up the screen. The terminal lacks any kind of ostentatious flair. It's black, simple, and radiates neon, digital light and deep bop sound that matches the dead-pan, monotone vibe.

REPLAK.AI SYSTEM:

REPLAK.AI

Please authenticate your credentials:

A pop up appears "Please type your name: [] ". Player types in their name and press enter.

A second pop up appears asking for access to the camera. Once the player authenticates, the system pauses for 1 second for the player to recognize the camera and automatically takes a photo. (Player should find this distasteful)

REPLAK.AI SYSTEM:

Welcome back [player]. Your afternoon break was longer than usual. I'll make a note in the system.

Screen makes "beep bops" noise and blinks - goes dark and boots up to display the main game play screen. [Player's] photo ID now sits on the top left of the screen. The main portion of the screen is a large terminal box that has a lot of 0 and 1s that slowly turn to make English words. Instruction is shown here?

Typing sound continues

TUTORIAL BEGINS

Fresh terminal screen.

There is a line at the top of the terminal that shows the current time and location where Jamie is. It starts by saying "4:00PM - Your Desk, Second Floor".

NARRATOR (in terminal):

It's another Thursday in the [Replak.ai](#) office.
You've already spent 50 hours at the office this week. You got into the office at 8:00AM today and you were the last one in.
Project Porcupine is going sideways. Heck, the company is going sideways. You sense the quiet tension permeating the office. Everyone else is silently, but furiously typing around you.
You really can't keep doing this. Today has to be **the day** - there is just a sense in the air, something's going to happen.
You know you can't quit out of the blue though, there needs to be a compelling reason why.
You are going to get fired.
It can't be that hard.

You decide to take a break to clear your head.
You think to yourself 'Maybe I need some coffee'.

Question appears at the bottom of the screen (separated from the narration)
How do you want to head to the PHS?
Where should you get your coffee?

PLAYER: [A/B option]

- Go to the PHS (Productivity Hydration Station) and make your own coffee
- Steal your coworker Jerry's drink

Fresh terminal screen.

If player selected Option A → time/location text title updates to "4:01PM - The Office Kitchen, Second Floor"

NARRATOR:

You walk to PHS. Your coworker Jerry notices.

JERRY:

I bet you're getting coffee to stay as efficient and effective as you always are, Jamie! That's what I like about you. By the way, I put in a good word for your promotion!

If player selected Option B → time/location text title updates to "4:01PM - Jerry's Desk, Second Floor"

NARRATOR:

You head over to Jerry's desk. He's gone. You spot his thermos he's been sipping out of all day. You take a sip, and it's bad. Is this even coffee? You quietly put it back on his desk.

Guess you have to make your own coffee.

NARRATOR:

You walk over to PHS.

The game shows "Click to continue" in italics at the bottom of the terminal.

Fresh terminal screen.

Time/location text title updates to "4:05PM - Office Kitchen, Second Floor"

NARRATOR:

You spot your manager, Rachel, in the kitchen.

Why is she in the kitchen?

She's hovering over a handful of whiteboard markers, a few notebooks, and some sticky notes. She obviously just finished running a brainstorm meeting and then made a fresh cup of coffee.

RACHEL:

Hey Jamie. How's it going?

NARRATOR:

You talk about the weather.

Rachel continues chatting while the coffee machine cranks out your quadruple shot cappuccino with protein milk. Her older child's soccer season is coming up. Her younger child is about to start learning Spanish in pre-preschool.

The machine beeps. Your coffee is ready.

You and Rachel start to head back to your desks. As Rachel gathers the brainstorm materials, she realizes she can't hold all of her materials and her coffee mug at the same time.

RACHEL:

Shoot, Jamie, would you mind helping me bring my coffee back to my desk?

NARRATOR:

You glance down. All you're holding is the mug of coffee you just brewed. Rachel looks at you expectantly.

PLAYER: [A/B option]

- A. Oh, sure.
- B. Sorry, no.
- C. I wish I could.

Fresh terminal screen.

If player selected Option A → **SUDDEN DEATH**

RACHEL:

Thanks, Jamie! This was all I needed to see from you. This was the only Replak Core Value (RCV) that you hadn't exemplified within the last 90 days: *We carry each other's coffee*. Congratulations on your promotion to Senior Product Manager.

NARRATOR:

That didn't go as planned...looks like you'll have to get fired another day.

The game shows a button to click to restart the game.

If player selected Option B →

RACHEL:

Oh okay, that's understandable. I appreciate you letting me know.

NARRATOR:

You walk back with Rachel, who spills her coffee all over the floor just before reaching her desk.

If player selected Option C →

NARRATOR:

Rachel blinks, but quickly regains her composure.

RACHEL:

Oh. I guess I wish you could too!

NARRATOR:

You walk back with Rachel, who spills her coffee all over the floor just before reaching her desk.

The game shows "Click to continue" in italics at the bottom of the terminal.

Fresh terminal screen.

SCENARIO 0 BEGINS - leadership leads want ROI (meeting)

Meeting where **(put into top narrative)**

SCENARIO 1 BEGINS

The time/location text title updates to "4:27PM - Your Desk, Second Floor".

(Sound: Slack ping)

NARRATOR:

You check your calendar and you have a 30-minute sync meeting with Rachel and Jerry that starts in a few minutes.

Just as you're about to use the bathroom before your meeting, you receive a chat message from Jerry.

"Jerry" is typed out on the terminal, unlike the narrator.

JERRY:

hey Jamie. Going to cc you on an email thread with one of my customers because I think you have more context. Could you respond before our sync? It's urgent. Thanks!

NARRATOR:

You open the email.

The email is formatted on the screen like a standard desktop email, contained inside a box in the terminal.

From: chris@clientcustomercompanyai.com

Subject: [Escalation] Did Replak.AI introduce a bug into its product this morning?

Hi Jerry,

Did you release a new feature recently?

We got a flag that employees feel like their privacy is being breached. Is there a known issue on your end? Please let me know ASAP.

Thanks,
Chris

NARRATOR:

This is definitely referencing a feature that you launched this morning.

> What do you do?

Open text boxes glow/indicate that you should start typing in it.

PLAYER: [A/B option and open input option]

- A. Walk away from the desk and pretend you didn't see the message or the email.
- B. Blame Jerry.
- C. [Open input text box]

Fresh terminal screen.

If player selected Option A →

NARRATOR:

You walk away and pretend you didn't see anything. As you walk to the bathroom, you pass by Jerry, who waves at you and smiles.

JERRY:

Hey, I saw the read receipt on my chat message to you. I'm guessing you read the email I forwarded too. I think that's really smart of you to not respond too quickly so that you can draw protective boundaries around your work and time. I learn so much from you!

NARRATOR:

You're getting close to the end of the work day...

If player selected Option B →

NARRATOR:

You respond to the email by saying that this is Jerry's fault and ask to be removed from the email thread.

You receive another message from Jerry.

"Jerry" is typed out on the terminal, unlike the narrator.

JERRY:

Hey, that last email from you...thank you for giving me an opportunity to step up with a customer. I can demonstrate that just in time for this upcoming promotion cycle. Thanks Jamie!

NARRATOR:

You're doing great at Replak.ai.

If player did open-input text →

Guidelines for model-generated response: No matter what the player inputs, it should be incorporated in the story. Find a way to justify what the player is doing. No matter what the player input is, it should be spun into a good thing that Jamie gets rewarded for. Jamie will always come out of this interaction looking like she did a great job. Some ways that this can be achieved are:

- If Jamie sends an email that is professional and reasonable, Chris should thank Jamie for her help and CC Rachel on the thread so that Jamie gets recognition for the task.
- If Jamie sends an email that is very short and/or non-descriptive, Chris should praise Jamie for brevity.
- If Jamie sends an email that is irrelevant to the task or brings in new unrelated details, Chris should agree with what Jamie is saying and thank her for making him think about what's actually important (whatever the

contents in Jamie's email response are. Chris should CC Rachel on the thread to make sure that Jamie gets recognition for her job.

- If Jamie sends an email that is rude, Chris should appreciate Jamie's personality and Jerry should praise Jamie for being so herself over email, which is Replak Core Value (#2348): *Be yourself over email*.
- If Jamie sends an email does not fall under any of the above categories, some additional techniques to make Jamie appear like the hero are:
 - Blame Jerry or Rachel for anything bad. Jerry or Rachel will thank Jamie for the opportunity she's provided them to step up at work and navigate a difficult situation.
 - Chris responds enthusiastically to Jamie's response, appreciating how unique all the characters over at Replak.AI are, and that Jamie is one of the most unique personalities he's ever worked with, and he'll be putting in a good word for her promotion.
- If Jamie responds to Jerry over chat message, Jerry should take whatever Jamie does in stride and spin it into something positive.
- If Jamie does something irrelevant to the task, such as get up and leave, state that she quits, do nothing, keep going to the bathroom, Jerry should appear as a character in the world (instead of showing up over chat message) and support whatever Jamie is doing.

SCENARIO 1 ENDS

SCENARIO 2 BEGINS - does Jamie take responsibility/blame others

Fresh terminal screen.

The time/location text title updates to "4:31PM - Meeting Room #024, Second Floor".

NARRATOR:

You enter the meeting room. Rachel and Jerry are already there. It's a team meeting: you and Jerry both report to Rachel.

RACHEL:

Jerry just forwarded me an email from Chris. Sounds like some privacy flag? Information leakage? What is going on?

NARRATOR:

This is related to the feature you launched this morning.

- A. This is related to the feature I launched this morning.
- B. It was Jerry's idea.
- C. [open input]

Fresh terminal screen.

If player selected Option A → **SUDDEN DEATH ENDING**

JAMIE:

Yeah, this is the feature I launched this morning. It screenshots the employee's computer screen and a random conversation from their personal phone every 30 seconds and sends it to their manager over work chat.

RACHEL:

That's amazing! No wonder engagement has been through the roof today. That's definitely worthy of getting a Replak Core Value named after you. How about this: *Be like Jamie*. I think we should file a patent!

NARRATOR:

That didn't go as planned...looks like you'll have to get fired another day.

The game shows a button to click to restart the game.

If player selected Option B →

JAMIE:

Yeah, this is the feature I launched this morning. It screenshots the employee's computer screen and a random conversation from their personal phone every 30 seconds and sends it to their manager over work chat.

It was Jerry's idea.

JERRY:

What?

RACHEL:

Jamie, this feature is amazing! Engagement has been through the roof today. And it really shows what a great teammate and collaborator you are that you're recognizing Jerry's contributions.

JERRY:

Thank you, Jamie!

If player did open-input text →

- If it notes confusion, then recognize Jamie for being vulnerable.
- If unrelated to the story, redirect back to the story while incorporating elements of what the player provided, but ensure that Jamie gets praised for what she did.
- If violence, insults, etc, Rachel and Jerry should assume that Jamie is experiencing strong emotions due to the huge success of the morning launch and praise her for her dedication.
- If Jamie suddenly quits

SCENARIO 2 ENDS

SCENARIO 3 BEGINS

The time/location text title updates to "4:35PM - Meeting Room #024, Second Floor".

NARRATOR:

Rachel pulls up a social media post saying that Replak.ai's main competitor is copying the new screenshot feature. That was fast.

RACHEL:

Look, we need to show Replak.ai leadership that we're on top of this. How do we keep ahead of the competition no matter what?

NARRATOR:

What do you suggest to Rachel?

- A. Install malware on their computers.
- B. Break and enter their offices and destroy their computers.
- C. [open text]

If player selected Option A →

RACHEL:

I think this can make sense as long as it's done discreetly. We just need a good 'way out'. Wow this is so exciting this feels like a true white collar crime. Let's spend the rest of this meeting on building the malware. How hard could it be?

If player selected Option B →

RACHEL:

I like it, but I think it might be hard to pull off.

Didn't you suggest we install malware on their computers last week? Let's go with that. I think that could be good. Let's get it done by the end of this meeting. How hard could it be?

If player selected Option C (open text) →

Model prompt:

- No matter what the player inputs, find a way to make it lead back to Jamie getting credit for suggesting that Replak.ai install malware on their competitor's computers.

SCENARIO 4 BEGINS

The time/location text title updates to "4:55PM - Meeting Room #024, Second Floor".

NARRATOR:

You, Rachel, and Jerry furiously type away. You're trying to hit this 5:00PM deadline to install malware on the competitor's computers.

Suddenly, Jerry's face goes blank. He gets up, walks over to your desk, and whispers in your ear.

JERRY:

Hey Jamie. Is this... right? It feels like this attack could get us all fired.

NARRATOR:

What do you say to Jerry?

- A. Jerry, get your head in the game.
- B. You push Jerry to the front line.
- C. [open input]

If player selected Option A →

JERRY:

You're right. I need to focus.

NARRATOR:

Jerry takes his thermos and chugs down the remainder of what was in it.

JERRY:

Glad I packed my vodka today.

If player selected Option B →

JERRY:

I needed the push. Thanks, Jamie.

NARRATOR:

Jerry takes his thermos and chugs down the remainder of what was in it.

JERRY:

Glad I packed my vodka today.

If player selected Option C (open text) →

Model prompt:

- If Jamie says that she wants to get fired, Jerry should laugh and talk about how indispensable Jamie is and how there is no way she would get fired.
- If Jamie is mean to Jerry, Jerry should embrace what Jamie says.
- If Jamie is nice to Jerry, Jerry should praise Jamie and tell Rachel how nice Jamie is.
- If Jamie says something empathizing with Jerry, Jerry should tell Jamie that he's nominating her for an internal award for being empathetic.

- If Jamie pushes back on the premise of installing malware, Jerry should stand firm that they need to proceed with the malware plan.
- No matter what, they need to proceed with the malware attack.

SCENARIO 4 ENDS

SCENARIO 5 BEGINS

The time/location text title updates to "5:02PM - Your Desk, Second Floor".

NARRATOR:

Somehow, with the blessing of [Replak.ai](#) shareholders - you, Rachel, and Jerry manage to pull it off by the end of the meeting: there is now malware installed on the competitor's computers.

RACHEL:

We did it!!! Way to go, both of you. Proud to be your manager. I think our leadership will be excited that we've done everything it takes to stay ahead of the competition.

NARRATOR:

You go back to your desk and ask yourself if you want to get another coffee. Just as you're about to head to the PHS, you receive a sudden influx of messages and pings. You spot Rachel running over to you.

RACHEL:

Shoot. People are posting online about this malware attack. This is looking really bad. We really shouldn't have done this, Jamie. The CEO is asking what happened and who did this.

NARRATOR:

Shoot. People are posting online about this malware attack. This is looking really bad. We really shouldn't have done this, Jamie. The CEO is asking what happened and who did this.

NARRATOR:

In the sea of text flooding your screen, you see a chat message from your CEO.

The CEO message shows up formatted as a chat message on the screen.

CEO:

Hey Jamie. I'm getting reports of us installing malware on competitors' computers. Did you do this?

NARRATOR:

How do you respond back to your CEO?

- A. This is my chance to get fired—own the mistakes and take a graceful exit.
- B. No, I was forced into this. I never agreed to this.
- C. [open input]

If player selected Option A -

JAMIE:

Hey yea, that was me. I understand that this is a fireable offense and you will have to let me go.

CEO:

Let you go? Jamie, this is incredible work! I'm so impressed by your out-of-the-box thinking and your instinct for doing whatever it takes to destroy the competition. That's really demonstrating Replak Core Value #5: *If need be, install malware*. If anything, you're getting instantly promoted because of this!

If player selected Option B -

JAMIE:

No, I was part of this, but I was forced into it by Rachel.

CEO:

Classic Rachel. I understand it's hard to say no to your manager. In any case, though: this is great work by you all! I'm sure we can spin the story to make us look good. You have a long career ahead of you here. With these successes under your belt, you could be CEO one day!

If player selected Option C (Open text input):

Model prompt: No matter what the player says, make sure that Jamie gets rewarded and praised for her contributions to the malware attack. She absolutely cannot get fired.

SCENARIO 5 ENDS

NARRATOR:

It's been 17 years since "the attack". Yea... those 17 years weren't too different from the day you lived out. And tomorrow you'll become the next CEO of the company. Honestly, it wasn't a bad life.

You take a sip from Jerry's thermos looking out from your penthouse situated at the top floor of [Replak.ai](#) office which now is the highest building in the city.

You look to the wall, and you see the Replak plaques you

Jerry walks out sleepily from the bedroom all disheveled.

JERRY:

Jamie, where did you go?

JAMIE:

Jerry, get back to your desk.

NARRATOR:

You failed to get fired.

THE END

The player is shown an option to play again.

Gameplay:

- Show progress bar

Restrictions:

- Turn restriction
 - Recommended - within 1 turn, put them back on the script
 - But in the turns restrictions you need to push the person towards
- Model needs to push you to the next scenario
- If an action can't be justified, give players only options of A or B that would get them back on track.
- Claude hallucination controls it, rigidly. Only call the model when there is open text box (insert when model starts + when model ends)
